We can substitute the two formulas together to get $W = Fd$ $F = PA$ $W = PAd$ $W = -P\Delta V$ • This formula would let us calculate the work done by the gas on the piston as it expands Example 1: A gas at 4.0×10^5 Pa is in a cylinder with a piston During an isobaric process the gas is heated and expands from 0.25 m^3 to 0.55 m^3 Determine the work done by the gas on the cylinder, and

Time Domain Techniques - Purdue Engineering

Both the time domain techniques require a step input to be given to the system This is done in this lab by using a square wave from the function generator as input The square wave can be thought of as a series of step inputs The output is recorded using $f_d(t)$ $y(t)$ $y(t)$
